Surgery

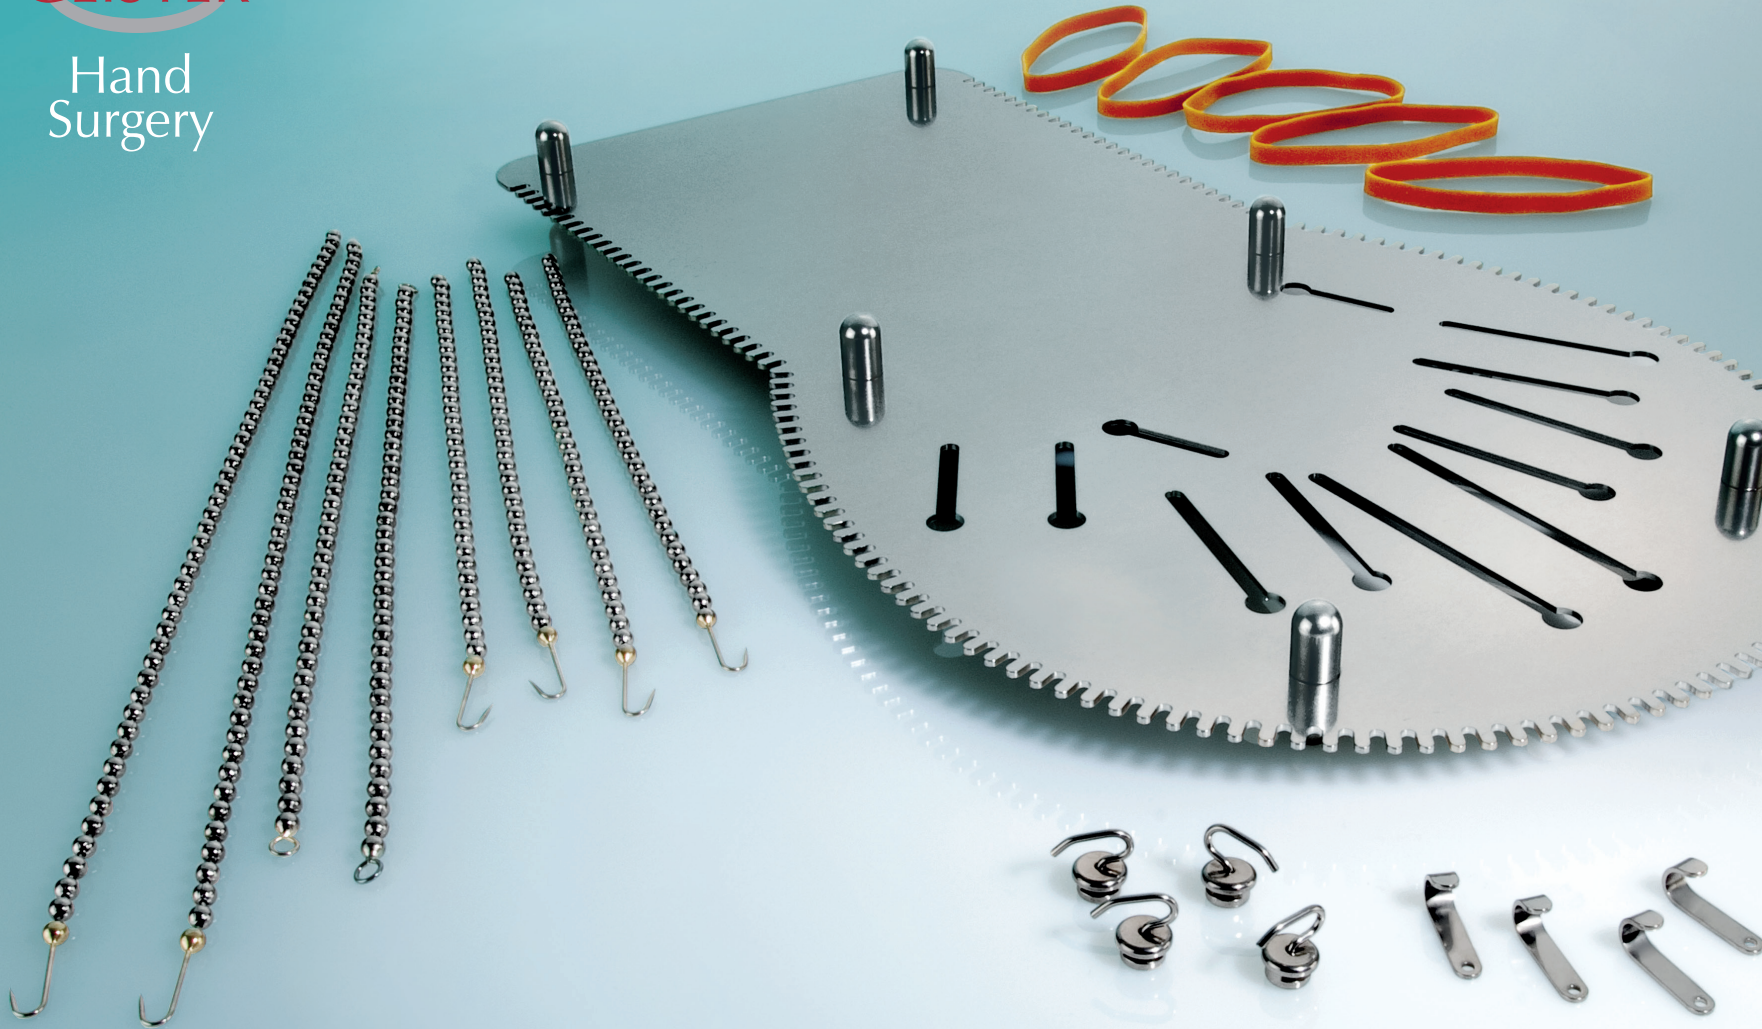

Our hands are our tools.

Hand Surgery

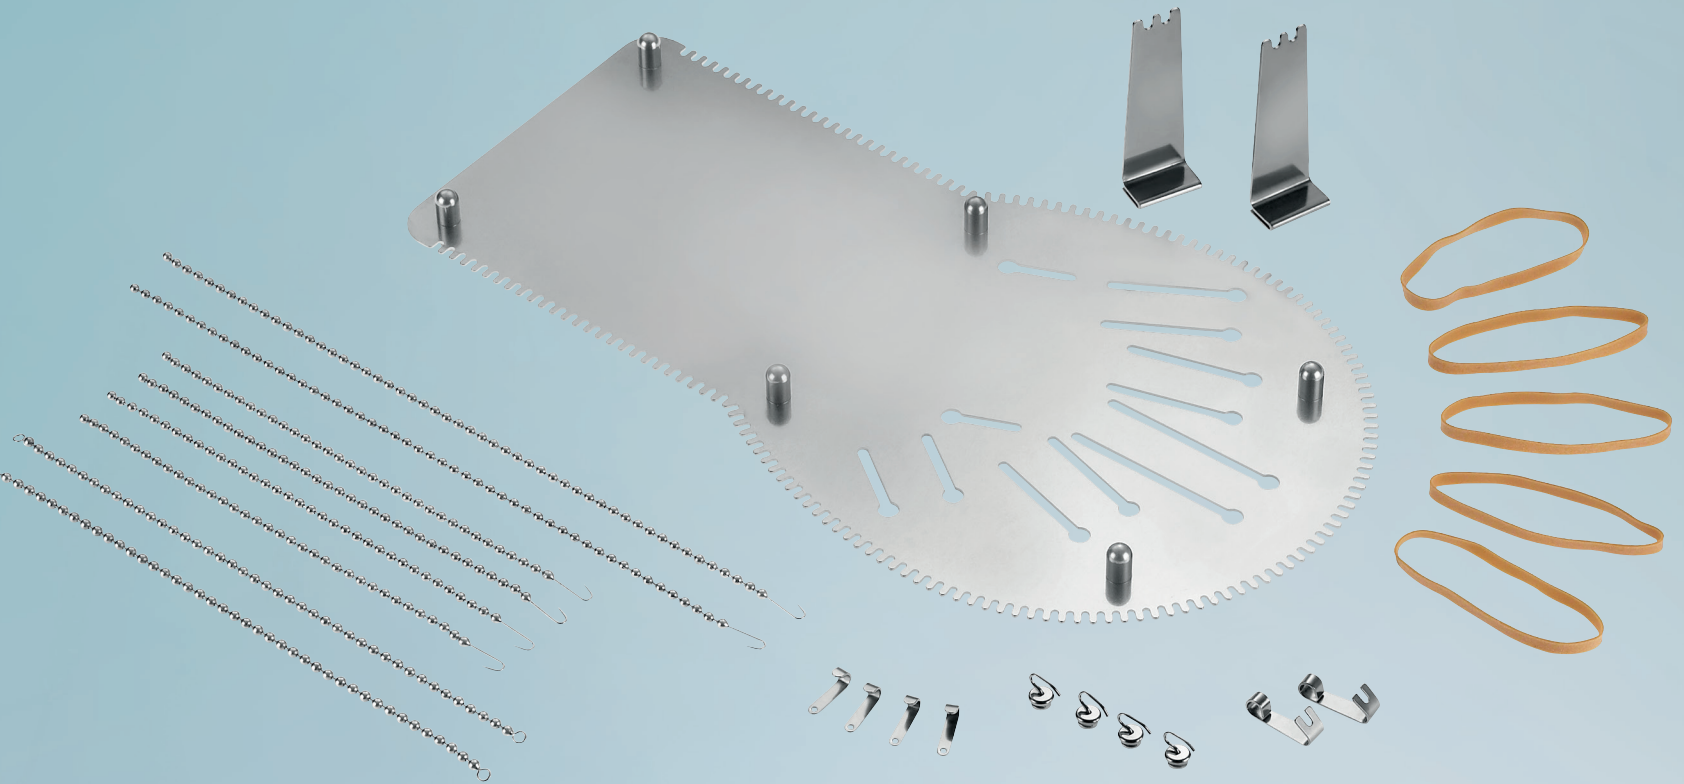

Our hands are our tools. Our surgical tools help to restore hands.

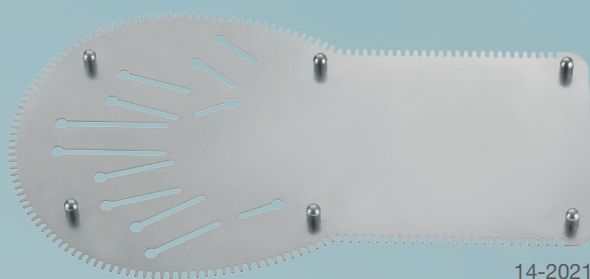

Hand Surgery has particularly developed in the last ten years. Our hands are our tools for every activity we complete in our day. They help us to eat, write, work, dress, create something etc.. To achieve this, proper joint motion, tendon gliding and muscle contraction are necessary. When they are affected by conditions such as arthritis, carpal tunnel syndrome or injuries, our daily life is impacted. To restore their function the surgeon has to deal with different types of tissues.

Hand microsurgeries require professionalism and competence as well as the most precise and delicate surgical instrumentation. Our universal hand holders and retractors enable the surgeon to fixate the hand in any position needed with ball chains of varying lengths or tendon or skin hooks. With the patient's hand positioned firmly, the surgeon can operate precisely and unhindered beneath a microscope with our special nano- and microsurgical instrumentation for hand surgery.
